

HX-1410 Cyclone Dust Collector

HX-1410 Cyclone Dust Collector introduction:

- The HX-1410 cyclone dust collector can be used in combination with a single cylinder and several single cylinders. The single cylinder processing air volume is 1.5-1.8 thousand meters³/hour.
- There is a reflective screen at the bottom of the vertebral body to prevent secondary air flow from re-elevating the separated dust.
- With the material level material sealing device, high dust removal efficiency, up to 95%.
- The inner wall is coated with 20 mm thick wear-resistant, high-temperature lining material, base wear resistance is 20 to 30 times that of ordinary carbon steel, its temperature is up to 450 °C, can directly deal with high-temperature exhaust gas.
